

Enrichment opportunities

At West Byfleet Junior School, many enrichment opportunities take place beyond the core offer of learning Science, promoting STEAM subjects in a number of ways throughout the year.

1. The Science lead offers science enrichment activities every term, so far these included building foam rockets and cannons, experimenting with balance, exploring water illusions or making ice-cream.
2. We take part in inter-school Science Quizzes.
3. We organise trips to various locations such as Kew gardens, Science Museum or attending a STEAM day at Thorpe park.
4. External facilitators come to our school to offer talks or run workshops such as making slime.
5. We take part in annual events namely STEM.org competitions, the Big Bird Watch or Outdoor Classroom Day.
6. We take part in yearly STEM week activities.
7. We promote STEAM carriers during assemblies.
8. Our children get to experience metamorphosis of Lady Butterflies first hand.
9. We held genuine Moon rocks and meteorites in our hands.
